

Thank you so much for your bare skin barrier. My gelding was suffering each summer with a swollen sheath and belly midline from "no-see-um" bites. My husband had to apply Bert's Bees insect barrier because it was the only product we could find that didn't make my geldings skin peel. I was unable to apply it myself because it contained mint which I am allergic to. This also meant that I had to stay away from my horse until the smell of mint went away -- not a good situation. Your bare skin barrier is a miracle solution! It works beautifully, his sheath and belly are protected and his skin is soft. And I can apply it myself!! Both Millennium (my Irish Sport Horse Gelding) and I love it!! THANK YOU, THANK YOU! This product has made summer in hot northern California enjoyable again!!
