Buyer BEWARE of Spot-On Treatments

Makers of Spot-On treatments being sued for adverse reactions and illnesses¹.

The National Resources Defense Council (NRDC) issues a paper April 2009 detailing a first of its kind study showing residue levels 1,000 times higher than the EPA allows posing a risk of cancer and damage to people's neurological and endocrine systems with children at the highest risk². However the NRDC believes the EPA should step in to **ban** these products nationwide.³

Nature's Balance Care® bio-based, eco-friendly fly, tick and insect products are the healthy choice for horse owners, their pets and their family. With the only organic listed OMRI® approved products on the market today that do not contain Pyrethrum, Permethrin, Rosemary or neuro-toxic ingredients, Nature's Balance Care® sets the standards with fully disclosed ingredients from active to inert so the customer can make an informed healthy choice for their horses, their pets and their families.

Visit www.NaturesBalanceCare.com and choose Where to Buy to find an online store or dealer near you.
